Sayed Ahmed Husain

Technical Solutions Engineer & Full-Stack Developer | Go, React, AI, System Architecture | Bridging Engineering Precision with Scalable Software Solutions to Drive $1M+ Enterprise Impact
Northern Governorate, Bahrain

Summary

I help enterprise organizations build secure, highly concurrent software systems by bringing the rigorous precision of life-safety electrical engineering to modern software architecture.With a multidisciplinary background spanning Electrical Engineering, Strategic Business Development, and Full-Stack Software Engineering (Go, React, TypeScript, AI), I bridge the gap between complex technical requirements and commercial growth. I don't just write code; I design intelligent systems and robust applications that scale securely across multiple platforms. Having led cross-functional technical teams and managed end-to-end procurement for multi-million-dollar government contracts, I understand that technology must ultimately drive measurable business value.Some of my recent measurable impacts include:↳ Architecting a real-time Go/WebSocket social platform achieving sub-50ms latency for 1,000+ concurrent users.↳ Securing $1M+ in government and private sector contracts at LIFECO through strategic technical bidding.↳ Ensuring 100% regulatory compliance for critical industrial infrastructure projects.I thrive at the intersection of robust backend architecture, intuitive frontends, AI integrations, and strategic business operations. If you're looking for an engineer who understands both the codebase and the balance sheet, let's connect.

Experience

Lichfield Fire and Safety Equipment (LIFECO)

Business Development & Public Relations In-Charge
May 2024 - February 2026 (1 year 10 months)
United Arab Emirates

Context: Tasked with expanding LIFECO's enterprise footprint in Bahrain, I leveraged my technical engineering background to bridge the communication gap between clients and execution teams.

Impact:

✓# Drove a robust pipeline expansion resulting in $1M+ generated revenue by managing complex, end-to-end technical vendor pre-qualifications and bids on the Bahrain Tender Board.

✓# Accelerated project execution pipelines by 20% by establishing strategic operational relationships with Bahrain Civil Defense, ensuring 100% regulatory compliance across all national projects.

Super Fire and Safety Services

Electrical Project Engineer

October 2022 - October 2023 (1 year 1 month)

Bahrain

Context: Led the engineering, design, and QA of critical life-safety infrastructure for highly regulated industrial giants.

Impact:

✓# Engineered and deployed strict GCC/NFPA-compliant systems for ALBA and Bahrain Steel, ensuring zero safety or compliance failures during final technical inspections.

✓# Streamlined project delivery, achieving a 15% reduction in overall commissioning time by directing a cross-functional team of 15+ technicians on-site.

channels by stc - Bahrain

Retail Sales Specialist

April 2022 - September 2022 (6 months)

Bahrain

Context: Served as a frontline advisor managing high-volume enterprise and retail clients, focusing on technical service optimization and product upselling.

Impact:

✓# Leveraged CRM to resolve complex operational inquiries, achieving top-tier customer satisfaction scores and driving measurable customer retention.

✓# Executed advanced cross-selling strategies, consistently meeting challenging corporate sales quotas for diverse telecommunications products.

Zain Bahrain

3 years 4 months

Acting Branch Manager & Retail Operations Specialist

February 2019 - March 2022 (3 years 2 months)

Bahrain

Context: Rapidly progressed through essential frontline roles—including Service Center Representative (Jul 2019 - Sep 2019) and Telesales Representative (Apr 2020)—before advancing to Retail Sales and ultimately Acting Branch Manager. This comprehensive journey allowed me to master the entire technical support pipeline and customer lifecycle.

Impact:
✓# Branch Leadership & Sales: Drove maximum branch profitability, consistently exceeding corporate revenue targets by 20% through targeted cross-selling and frontline retail excellence.
✓# Telesales & Outreach: Executed high-volume outbound telesales campaigns, effectively driving promotion uptake and expanding the active customer base.
✓# Technical Support (Service Center): Minimized service downtime and boosted customer retention metrics by 30% by rapidly troubleshooting complex technical claims and resolving high-volume service inquiries.

Trainee
December 2018 - February 2019 (3 months)
Bahrain

Context: Selected for an intensive training program focusing on telecommunications retail operations, quality auditing, and frontline customer engagement.

Impact:
✓# Mastered technical support protocols and customer service fundamentals, demonstrating high adaptability that led to an immediate full-time promotion within the organization.

Megger
Electrical Engineering Intern
July 2020 - September 2020 (3 months)

Context: Selected for an international remote technical internship with Megger, focusing on the operational fundamentals and diagnostics of high-precision electrical test equipment.

Impact:

✓# Mastered the protocols for comprehensive diagnostic testing—including grounding resistivity, CT, VT, and protective relays—crucial for the accurate performance assessment of complex electrical motor systems.
✓# Gained foundational expertise in industrial-grade testing, bridging theoretical electrical engineering concepts with practical, industry-standard diagnostics in a remote learning environment.

Education

University of Bahrain

Bachelor of Science - BS, Electrical Engineering · (September 2015 - June 2022)

Reboot Coding Institute

Professional and Specialized Skill Intensive 2-Year Program, Fullstack developer · (March 2024 - September 2026)
